Aerospace and Defense Declarable Substances List (AD-DSL)

Aerospace and Defense Declarable Substance List (AD-DSL) is a list of substances subject to supplier substance reporting in the aerospace and defense supply chain. It is a list of chemical substances that are commonly used in the manufacture, repair and ongoing maintenance of aerospace and defense products, and which are controlled under a variety of regulations impacting the industry.

Pico Electronics is committed to providing safe, high-quality products for our customers. We are continuously working with our supply chain partners to ensure the purchase of materials that will meet AD-DSL standards. We continue to monitor the regulations for any new chemicals and will communicate any new information once available.

Pico Electronics manufactures products that the majority contain lead (Pb) solder. No radioactive substances or biocides are present.

This document information is valid and accurate to the best of our knowledge for products in their original condition as shipped from our manufacturing location.
