## Per and Polyfluorinated Substances (PFAS)

Per and PolyFluoroalkyl Substances (PFAS) are a group of chemicals, man-made Carbon and Fluorine based, used to make fluoropolymer coatings and products that resist heat, oil, stains, grease, and water. Such substances have various applications in electronic products such as protective/water-resistant coatings and do not easily degrade. They are persistent and bio-accumulative in nature, and so are referred to as forever chemicals.

Pico Electronics is committed to providing safe, high-quality products for our customers. We have and are working with our supply chain partners to ensure the purchase of materials that will meet PFAS standards. We continue to monitor the Per and PolyFluoroalkyl Substances regulations for any new chemicals and will communicate any new information once available.

Pico Electronics does not manufacture products containing chemicals listed in Per and PolyFluoroalkyl Substances and as such this document information is valid and accurate to the best of our knowledge for products in their original condition as shipped from our manufacturing location.
